Vaccon Introduces Next Generation of Miniature Vacuum Switches

New Electronic Vacuum Switches Feature Better Performance and Economy

Medway, MA—Vaccon Company Inc. announces the introduction of its new VXX Series Miniature Vacuum Switches that represent the next generation of vacuum switch and sensor technology. VXX Series switches are designed specifically to meet the needs of applications like Robotics, Pick-And-Place, Material Handling, Vacuum Monitoring, and Leak Testing.

Vaccon's VXX Series Switches are miniature electronic vacuum switches easily mounted directly to a wide variety of Vaccon and non-Vaccon vacuum pumps. Compact and lightweight, VXX Series Switches are ideal for use in robotics, end-of-arm end effectors, and manifold systems. The VXX Series Electronic Vacuum Switches feature field-adjustable set point for the full vacuum range and independent hysteresis adjustment. VXX Series Switches feature a bright LED display for visual confirmation of readings and are equipped with an M8, 3-pin Quick Disconnect on a 1M lead wire. VXX Series Vacuum Switches provide users with a choice of output (NPN, PNP), choice of vacuum port (1/8" NPT, G 1/8, and M5), and an optional 5M lead wire cord set with M8, 3-pin female connector. List price for VXX Series Electronic Vacuum Switches is \$75.25.

Vaccon Company Inc., founded in 1972, is the leading U.S. manufacturer of air powered venturi vacuum pumps. Vaccon supplies the manufacturing and process industries with reliable vacuum products characterized by efficient operation, rugged construction and low costs. Their expanded vacuum pump product line includes Modular Venturi, Dirt Tolerant and Material Conveying Pumps, Silencers, Blowers, Check Valves, Vacuum Cups and Switches, End-of-Arm Tooling components and more. No matter what the size of the order, Vaccon will modify any standard product or provide a custom design if an off-the-shelf product does not meet your requirements.
